
Creating Online Mapping Applications With ESRI's Web App Builder

Course Length: 8 hrs

ArcGIS Version: 10.x

Overview

As organizations look for better and more efficient ways to deliver their GIS content, many are turning to online mapping with ArcGIS Online. To offer an even more focused and powerful online GIS experience to their users, they are incorporating ESRI's Web App Builder with ArcGIS Online. Web App Builder provides them the ability to rapidly create and deliver specific online mapping applications based on their own online GIS content but without the need to write code or become web developers.

Audience

Those who are comfortable with ArcGIS Online and want to develop web-based applications using their online content.

Topics Covered

- What is Web App Builder – Take an initial tour of the tools, use, and scope of Web App Builder, and get a review of the ArcGIS Online environment that is the foundation for web applications.
- Ready to Use Apps – Examine the ready-to-use applications that are a critical component of the overall web application and mapping world.
- Customizable Apps – Learn how to take application templates and customize their properties to easily create your own web apps.
- The Web App Builder Interface – Uncover the tools and techniques of the Web App Builder interface to create unique web-based GIS applications.
- Incorporating Widgets – Explore the many different and powerful components (called widgets) you can add to your web apps to create the right interface for your project.

Format

In-person instruction with hands-on practice and take home training manuals.

Prerequisites and Recommendations

Attendees should have knowledge of Microsoft Windows® and have a comfortable working knowledge of ArcGIS Desktop and ArcGIS Online.
